PLANTING INSTRUCTIONS

- ALWAYS CALL DIG SAFE NY TO MARK UTILITIES, PRIOR TO DIGGING
- ALWAYS LIFT/MOVE MATERIALS BY CONTAINER OR ROOT BALL, NOT BY STEM OR BRANCHES
 - NEVER DROP THE ROOT BALL OR CONTAINER
- DO NOT DISTURB OR BREAK APART THE ROOT BALL DURING PLANTING

1) DIG HOLE AT LEAST 6-9" WIDER THAN BALL OR CONTAINER ALL THE WAY AROUND, WIDER FOR HEAVIER CLAY SOILS.

2) THE BOTTOM OF THE BALL SHOULD REST ON UN-EXCAVATED SOIL, AND THE TOP OF THE BALL SHOULD SIT 2-3" ABOVE EXISTING GRADE, WITH ROOT FLARE EXPOSED. ACTUAL DEPTH OF HOLE IS DEPENDENT ON BALL/POT SIZE AND SOIL TYPE. EXCAVATE TO 2" LESS THAN HEIGHT OF ROOT BALL OR CONTAINER. TO MAKE A SLIGHTLY RAISED PLANTING.

3) FOR BALLED AND BURLAPPED TREES, LEAVE WIRE BASKET AND BURLAP INTACT. ONCE THE TREE IS IN THE HOLE, AND STAKED. REMOVE UPPER RING OF WIRE BASKET ALONG WITH ALL WIRE, ROPE, TWINE AND BURLAP FROM THE TOP OF THE BALL AND AROUND TRUNK.

- PLASTIC POTS SHOULD BE REMOVED FROM PLANTS BEFORE PLACING IN HOLE
- PEAT POTS SHOULD BE LEFT ON TREES AND SHRUBS FOR PLANTING. THE LIP OF THE POT CAN BE CUT OFF AFTER PLANTING.

4) BACKFILL HOLE WITH NATIVE SOILS, AMENDING WITH UP TO 50% TREE AND SHRUB MIX, COMPOST, OR FRESH TOPSOIL, NOT POTTING SOIL. TAMP SOIL AROUND BALL WITH YOUR FOOT TO MINIMIZE EXCESSIVE AIR GAPS, SETTLING AND SHIFTING.

5) DO NOT COVER THE TOP OF THE BALL, OR CONTAINER, WITH SOIL. SOILS SHOULD COME UP TO EDGE AND TAPER AWAY BUT NOT COVER THE TOP.

6) APPLY A LAYER OF MULCH, APPROXIMATELY 2-3" THICK OVER THE TOP OF THE BALL AND SURROUNDING PLANTING AREA. KEEP MULCH 1-2" AWAY FROM THE TRUNK. AFTER PLANTING, WATER IN YOUR NEW PLANT WITH A DEEP, SATURATING WATER. THIS WILL HELP SETTLE REMAINING SOIL.

WATERING INSTRUCTIONS

YOUR NEW PLANT WILL NEED WATERING FOR AT LEAST THE FIRST YEAR, OR TWO, AFTER PLANTING WHILE THE ROOT SYSTEM BECOMES ESTABLISHED. EVEN WITH RAIN, YOUR PLANT CAN DRY OUT.

DEEP, SATURATING WATERINGS ARE BETTER THAN QUICK, SHALLOW WATERINGS. WATER NEEDS TO PENETRATE THE SOIL AND REACH ALL ROOTS, NOT JUST THE SURFACE ROOTS DURING EACH WATERING. ACTUAL DURATION AND FREQUENCY OF EACH WATERING IS DEPENDENT ON PLANT SIZE AND CONDITIONS. HOT, DRY WEATHER WILL INCREASE WATERING NEEDS, WHILE COOL, DAMP CONDITIONS MAY LESSEN NEEDS.

TO CHECK WATERING NEEDS OF YOUR PLANT STICK YOUR FINGER 3" INTO THE SOIL ALONG THE DRIPLINE. IF THE SOIL FEELS DRY WATER IMMEDIATELY. IF THE SOIL FEELS DAMP DO NOT WATER. IF NEEDED, MOISTURE METERS CAN HELP YOU DETERMINE WATERING NEEDS.

WILTING, BROWNING AND/OR YELLOWING OF LEAVES ARE ALL INDICATORS THAT YOUR PLANT MAY NOT BE GETTING THE CORRECT AMOUNT OF WATER. THIS CAN BE AN INDICATOR OF EITHER TOO MUCH OR TOO LITTLE WATER.

WATER AT THE DRIP LINE OF YOUR PLANT. TRY TO AVOID OVERHEAD WATERING SYSTEMS OR WATERING THE FOLIAGE, ESPECIALLY DURING THE HOTTEST PARTS OF THE DAY. WATERING IS BEST DONE IN THE MORNING TO MINIMIZE FOLIAR BURN AND/OR DISEASE.

FALL AND END OF SEASON WATERINGS ARE IMPORTANT AS WELL. THESE HELP ENSURE THERE IS ENOUGH AVAILABLE MOISTURE IN THE GROUND FOR THE PLANT TO UTILIZE DURING THE SPRING THAWS WHICH CAN HELP TO MINIMIZE WINTER DESICATION.
